

# Package ‘LargeScaleIncidenceRates’

August 10, 2017

**Type** Package

**Title** OHDSI Large Scale Incidence Rates Study

**Version** 0.2.1

**Author** Patrick Ryan [aut, cre],  
Marc Suchard [aut],  
Martijn Schuemie [aut]

**Maintainer** Patrick B. Ryan <ryan@ohdsi.org>

**Description** More about what it does (maybe more than one line).

**Depends** DatabaseConnector (>= 1.11.4)

**Imports** SqlRender (>= 1.3.0),

**Suggests** OhdsiRTools (>= 1.3.0)

**License** Apache License 2.0

**LazyData** TRUE

**RoxygenNote** 6.0.1

## R topics documented:

execute	1
LargeScaleIncidenceRates	2
submitResults	3

<b>Index</b>	<b>4</b>
--------------	----------

---

execute	<i>Execute OHDSI Keppra and the Risk of Angioedema study</i>
---------	--

---

## Description

Execute OHDSI Keppra and the Risk of Angioedema study

## Usage

```
execute(connectionDetails, cdmDatabaseSchema,  
        oracleTempSchema = workDatabaseSchema, outputFolder)
```

**Arguments**

connectionDetails	An object of type connectionDetails as created using the <a href="#">createConnectionDetails</a> function in the DatabaseConnector package.
cdmDatabaseSchema	Schema name where your patient-level data in OMOP CDM format resides. Note that for SQL Server, this should include both the database and schema name, for example 'cdm_data.dbo'.
oracleTempSchema	Should be used in Oracle to specify a schema where the user has write privileges for storing temporary tables.
outputFolder	Name of local folder to place results; make sure to use forward slashes (/). Do not use a folder on a network drive since this greatly impacts performance.

**Details**

This function executes the OHDSI Large Scale Incidence Rates study.

**Examples**

```
## Not run:
connectionDetails <- createConnectionDetails(dbms = "postgresql",
                                             user = "joe",
                                             password = "secret",
                                             server = "myserver")

execute(connectionDetails,
        cdmDatabaseSchema = "cdm_data",
        oracleTempSchema = NULL,
        outputFolder = "c:/temp/study_results")

## End(Not run)
```

---

LargeScaleIncidenceRates

*LargeScaleIncidenceRates*

---

**Description**

LargeScaleIncidenceRates

---

`submitResults`*Submit the study results to the study coordinating center*

---

**Description**

Submit the study results to the study coordinating center

**Usage**

```
submitResults(outputFolder, key, secret)
```

**Arguments**

<code>outputFolder</code>	The path to the folder containing the <code>Results.csv</code> file.
<code>key</code>	The key string as provided by the study coordinator
<code>secret</code>	The secret string as provided by the study coordinator

**Details**

This will upload the file `StudyResults.zip` to the study coordinating center using Amazon S3. This requires an active internet connection.

**Value**

TRUE if the upload was successful.
